How about this:

The PCB Exposure Estimation Tool, Version 1.2 (November 2010), is an update of the previous version. The Tool was updated based on more recent dietary data from the Food and Drug Administration's 2003 Total Diet Study. Using these data, dietary intake of PCBs is assumed to be lower than that assumed in Version 1.1 of the Tool.

Yes. Please do be sure to include a note concerning how version 1.2 differs from version 1.1.

Thanks for staying on top of this

Jeff
